

Cork Tiles

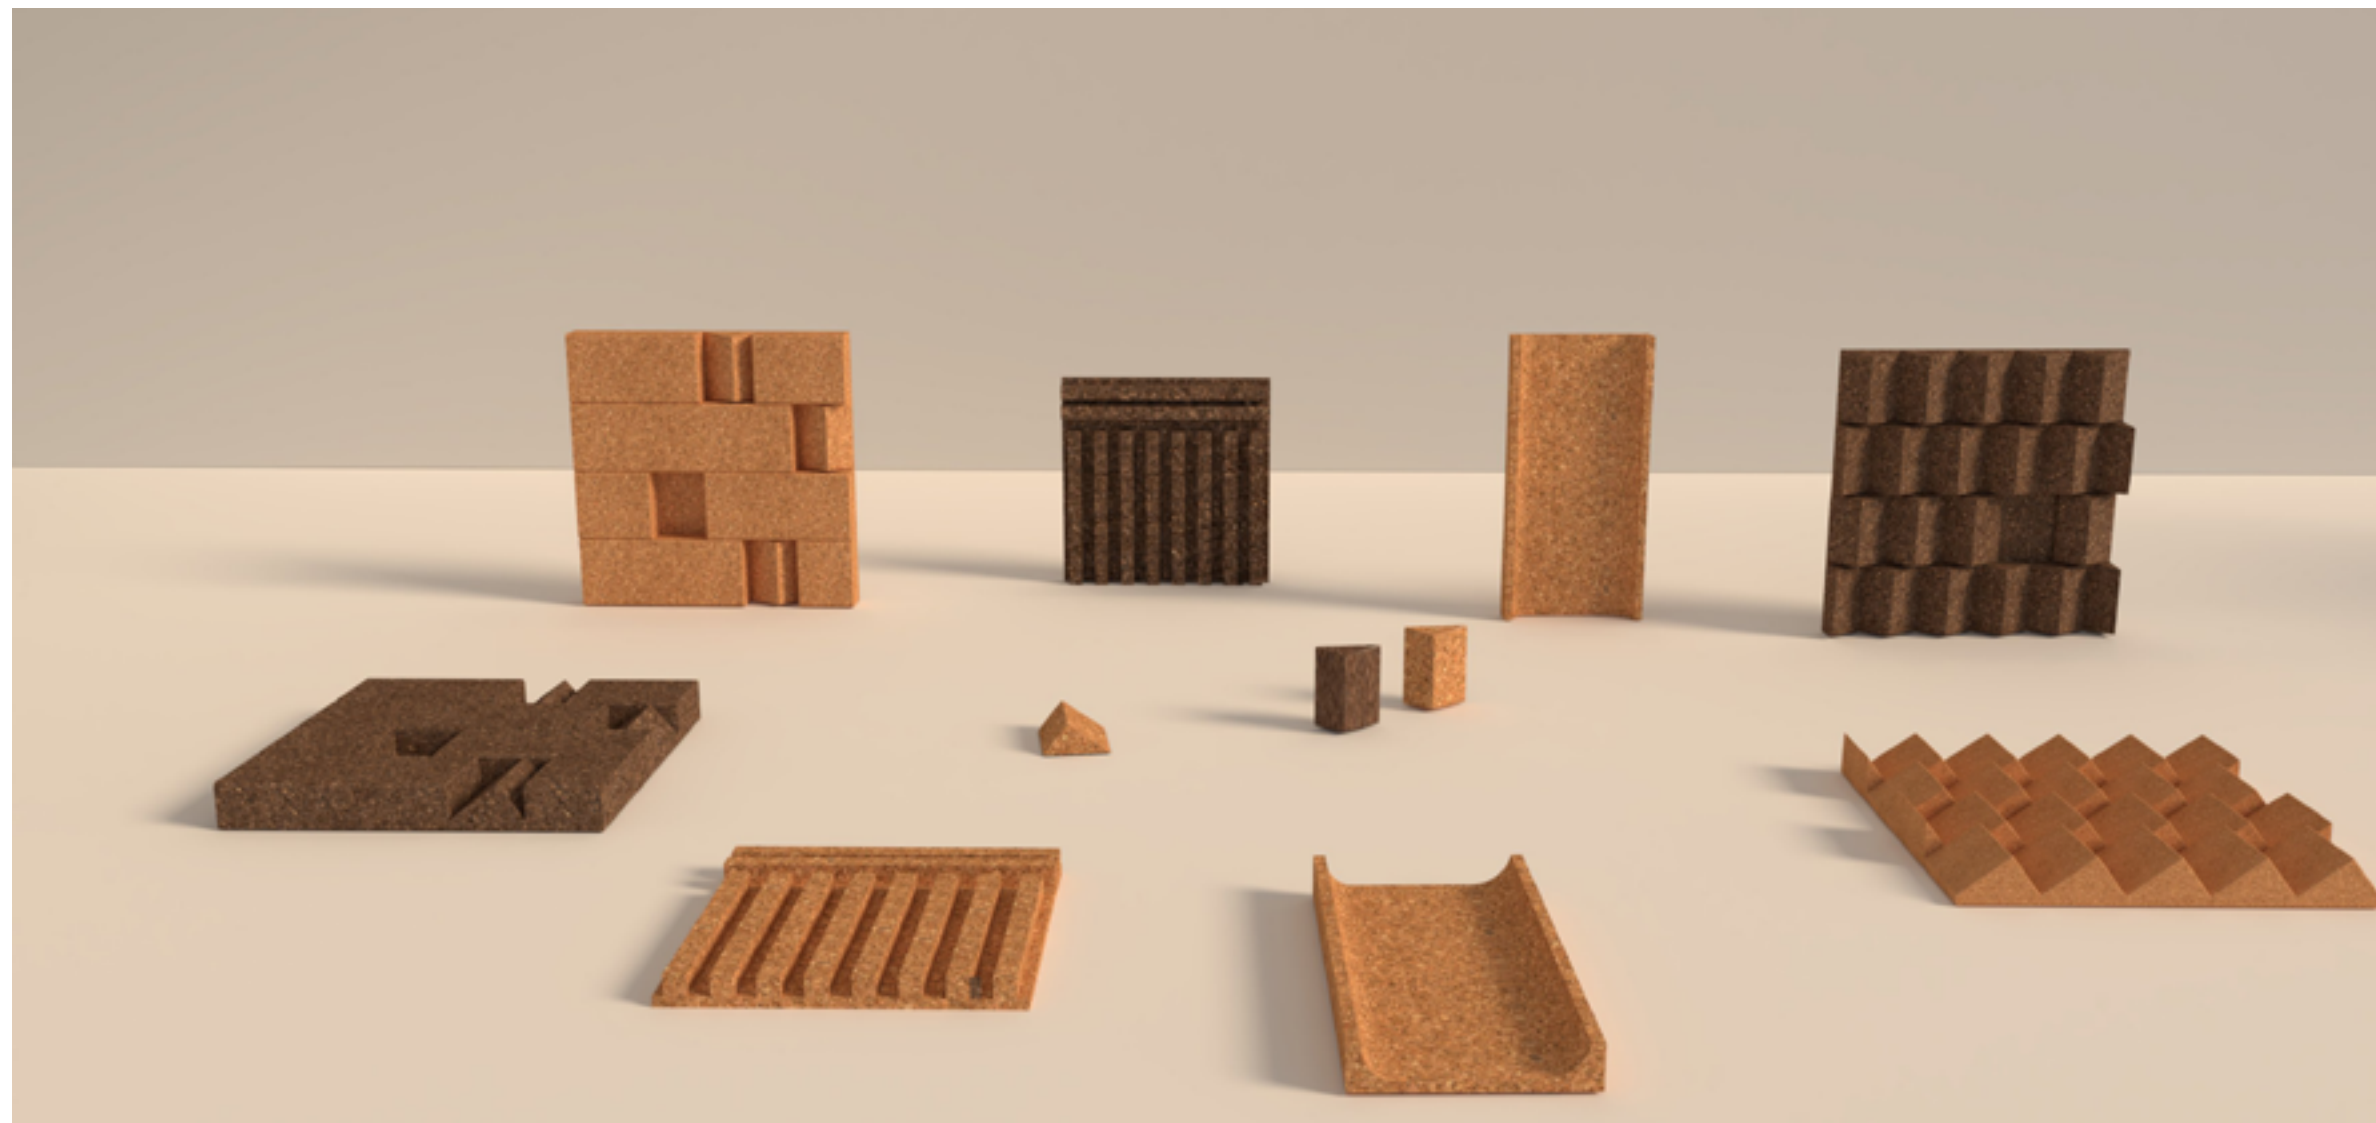

Greenmood has been always deeply committed to environmental sustainability and was always dreaming of bringing something revolutionary to the world of interior design. Little did we know that our dream was about to come true with the launch of our new product: cork wall tiles.

The journey to create these revolutionary cork wall tiles was filled with dedication, hard work, and innovation.

They wanted a product that not only looked beautiful but also delivered tangible benefits to the users. The team worked tirelessly to ensure that the tiles were easy to install, customizable to suit various design preferences, and, most importantly, environmentally friendly.

The idea for cork wall tiles had been brewing in the minds of Alain and Sadig for years. They believed that the world was ready for a change, ready to embrace more sustainable, more eco friendly options in interior design. Cork, being a natural and renewable material, has always fascinated them, and they saw its untapped potential.

Design by
Alain Gilles

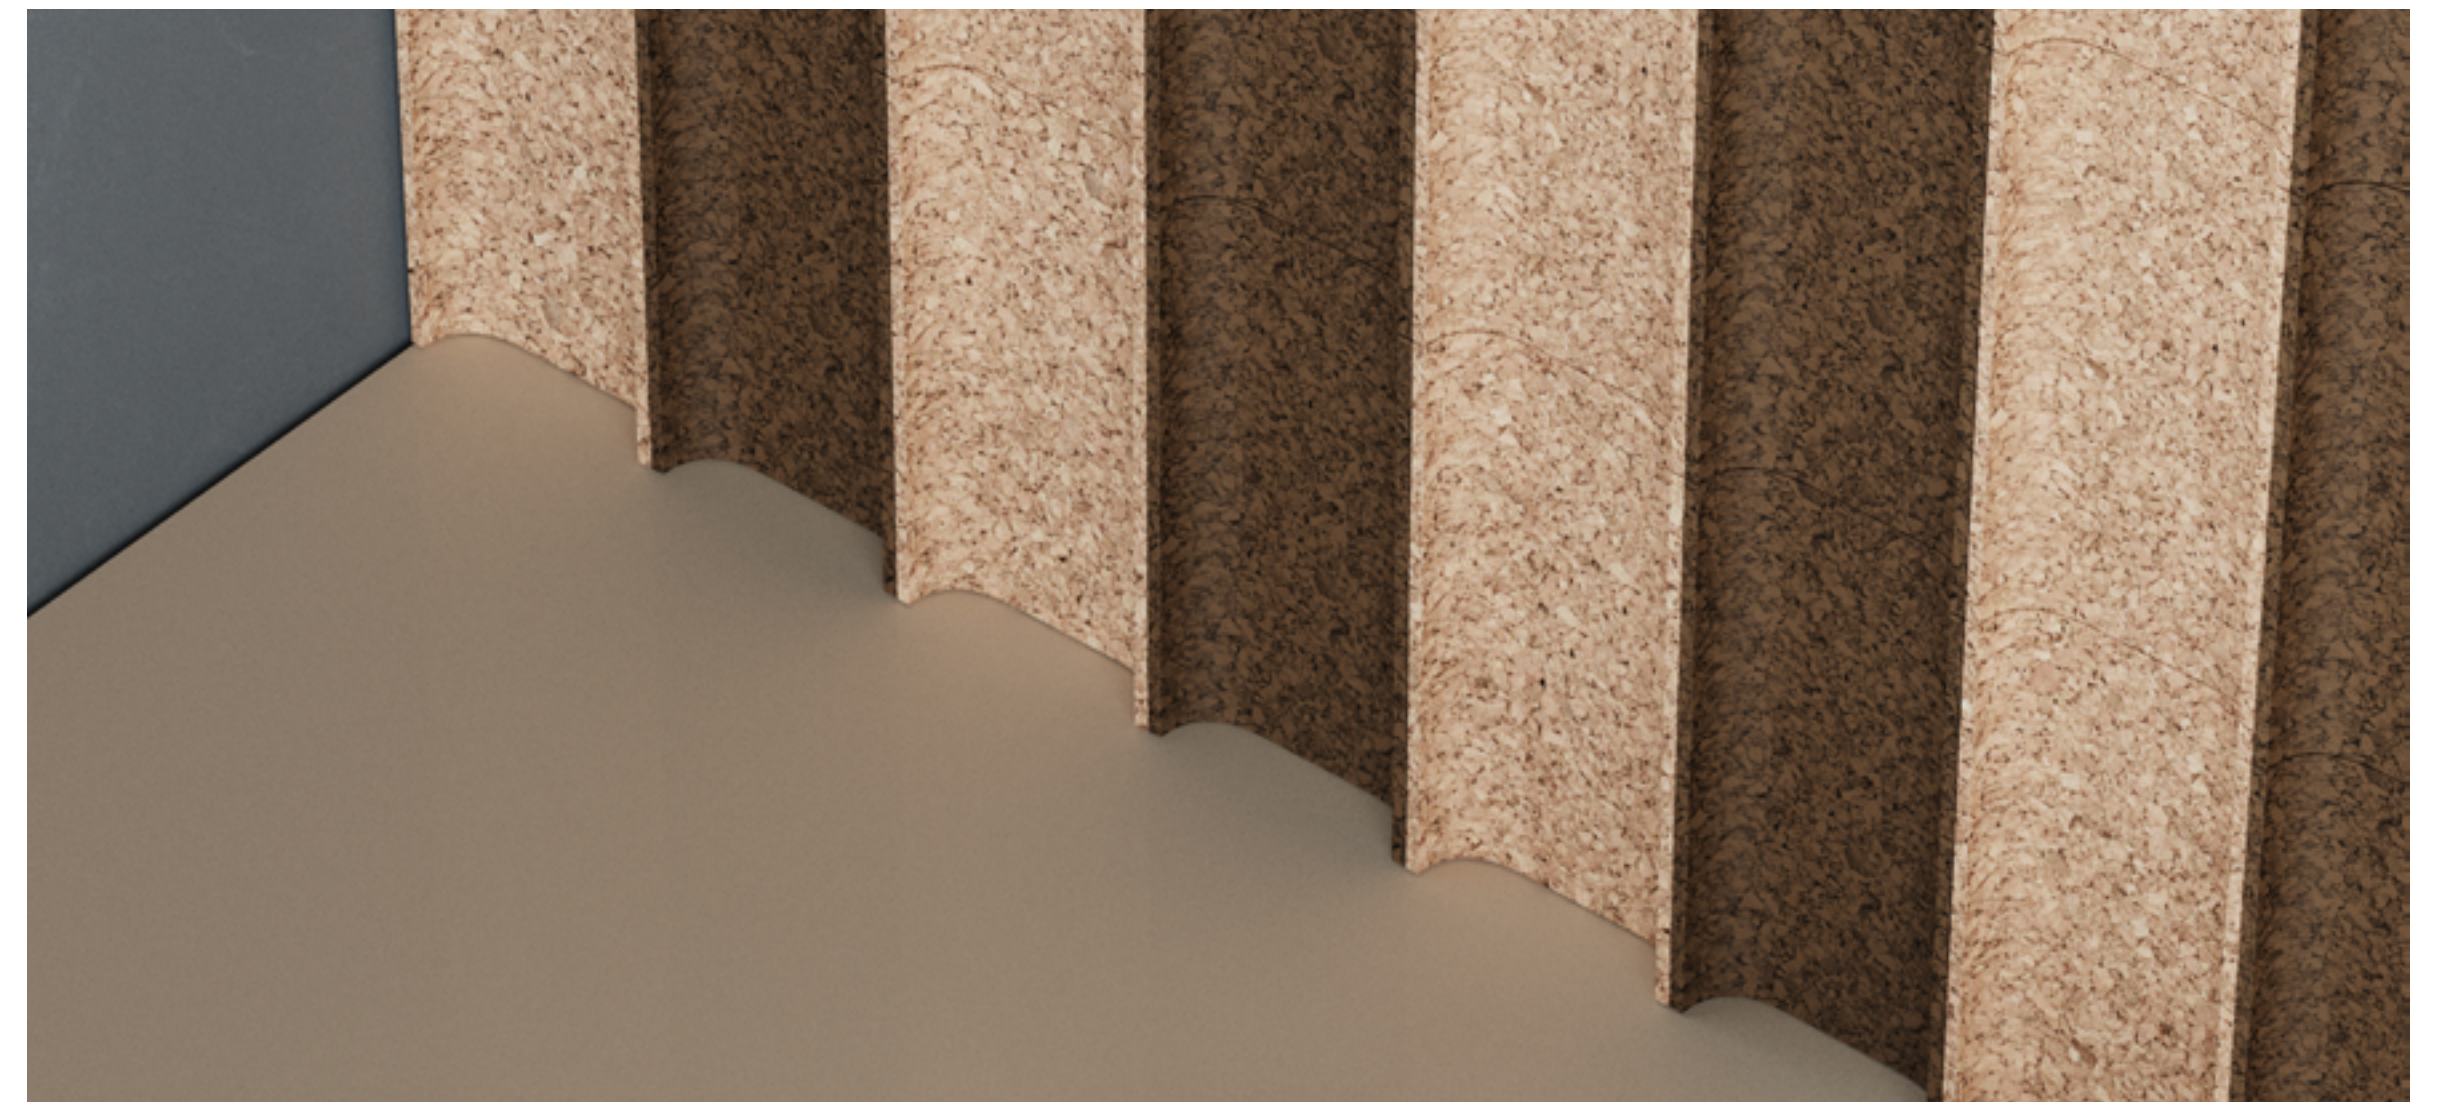

“Parenthese ” is a modular cork panel allowing people to create large cork wall just like one would do with tiles.

They are meant to be tools for architects, to help them define and design spaces with natural biophilic materials.

Each element is 41 cm (16.1”) x 21 cm (8.3”), with two very soft curves on its inner

edges that create a subtle shadow. Two panels used side by side create a square.

They can be used vertically or horizontally to define specific areas, to reference historical wooden wall panels, or to create modern graphic walls by playing with colors or by creating patterns through interesting juxtapositions.

01 Parenthese

02 Sillon

“Sillon” which means groove in English is a modular cork panel allowing people to create large cork wall just like one would do with tiles.

Their logic comes from the will to create a pattern for a cork panel that can be multiplied while making the seams difficult to see and the original small pattern difficult to notice. Each tile measures 32,5 cm (12.8”) x 32,5 cm (12.8”).

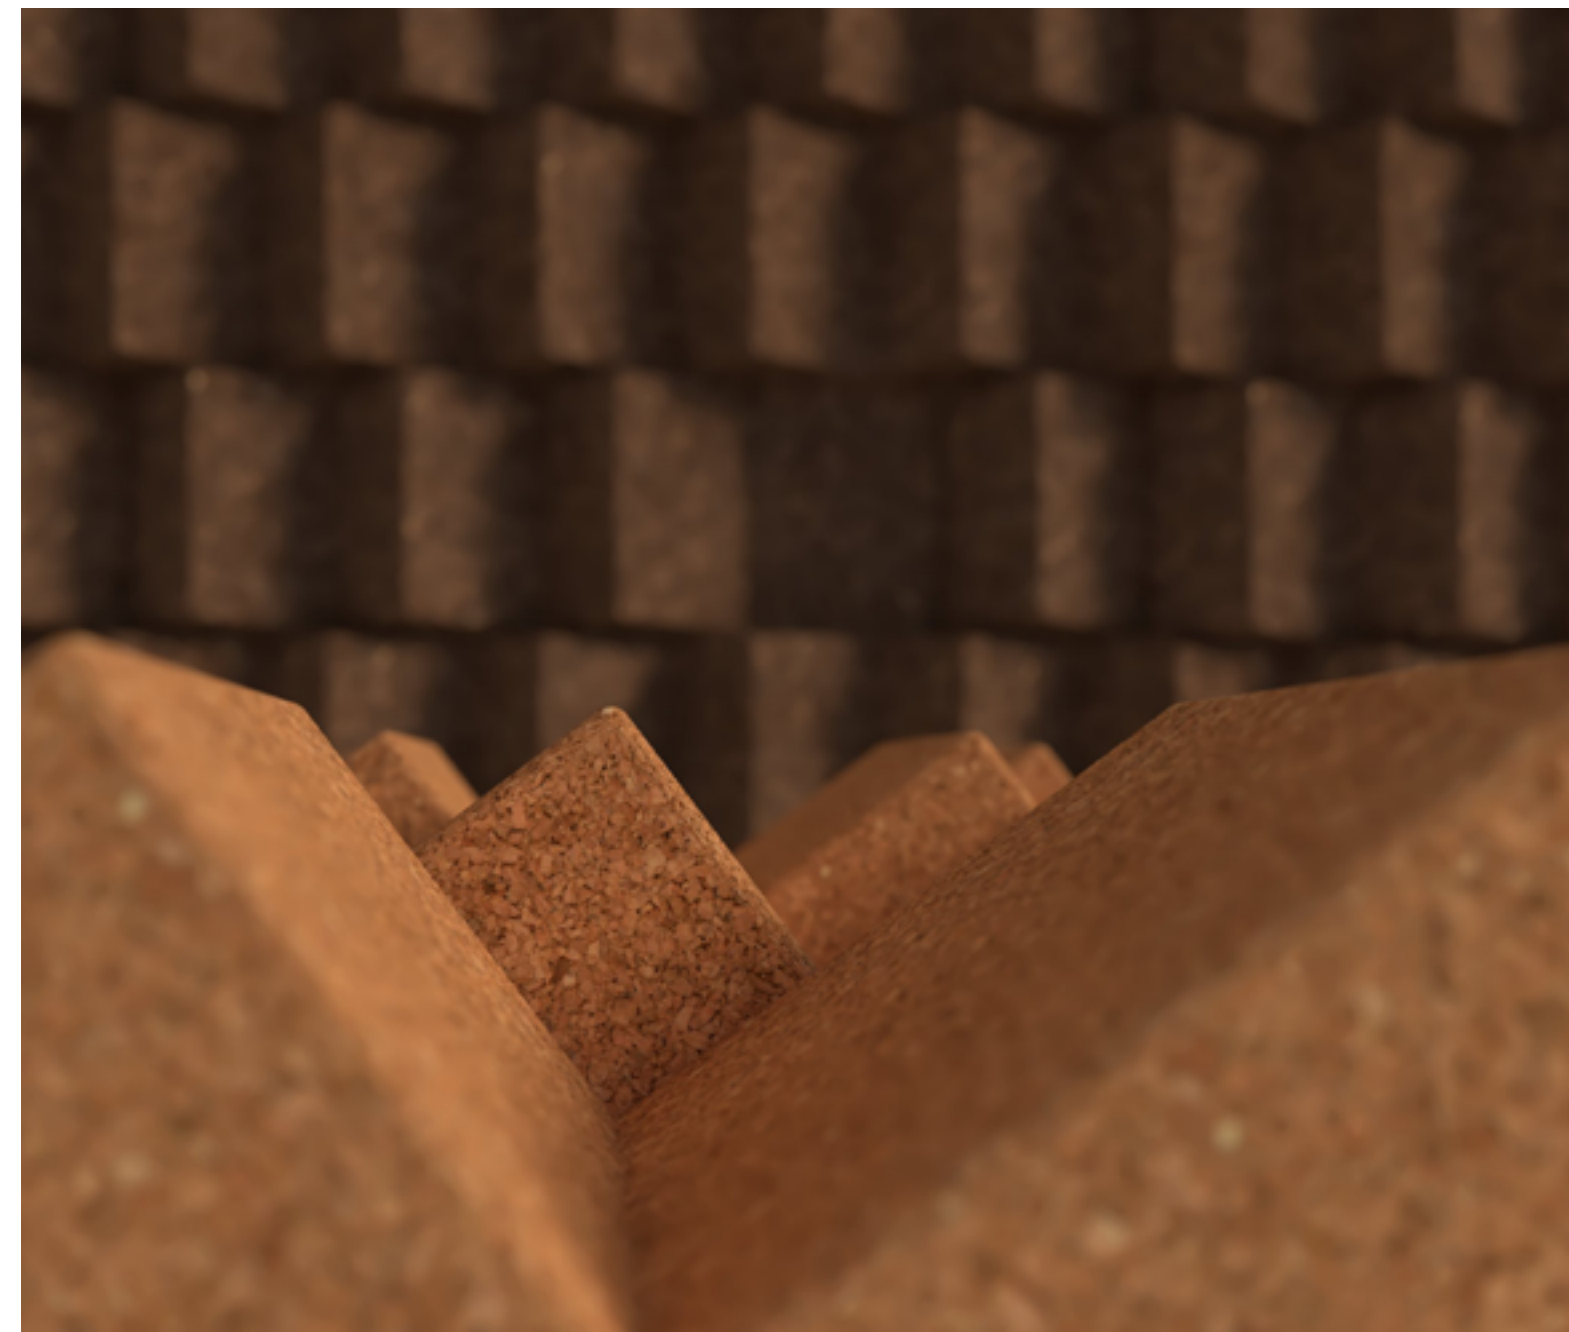

By turning the panel on its four different sides, a wide variety of combinations and larger patterns can be created, thus giving them a flexibility and more freedom for architects to create slightly more unique 3D walls with standard panels.

The idea of playing with various colors of brick and creating specific rhythms and ornamentation on exterior walls, inspired Alain to bring similar logic into our interiors, but using a softer, more welcoming material. Cork is known for its excellent sound-absorbing properties.

Brickx helps to reduce reverb, echo and other noise to create a more tranquil space for focus and relaxation. It's a natural insulator, which also enables it to regulate temperature, leading to a more comfortable and eco-friendly living space. Each panel measures 40,5 cm (16") x 40,5 cm (16").

04 Morse

Inspired by the mixture of long and short graphic elements of morse code, the long flat sides and short angles of our Morse cork tiles enable you to create unique concepts that are true to you and your vision. Have your code, your way with the potential for patterns, shapes, pictures, abstract concepts

and more with our versatile cork tiles – all naturally harvested from the cork oak tree.

A matte finish diffuses light softly, reducing glare and creating a warm, ambient lighting effect, aiding relaxation and peace.

With each panel comes a small, modular piece that can be placed into the cavity in order to add color contrast or fill up the empty space.

Each tile measures 40,8cm (16”) x 40,8 cm (16”).
